WASTEWATER TREATMENT PLANT EXPANSION - 2017

CITY OF WARSAW, INDIANA

INDEX TO DRAWINGS

SHEET NO. **AG01**

PAGE NO. 2

GENERAL PROJECT NOTES:

1. THE CONTRACTOR SHALL NOTE THAT THE WORK SHOWN ON THESE DRAWINGS IS OCCURRING ON A PLANT SITE IN WHICH BURIED ELECTRICAL CONDUITS AND SMALL PIPING MAY EXIST THROUGHOUT, ALL OF WHICH IN THE VICINITY OF THIS PROJECT MAY NOT BE SHOWN ON THESE DRAWINGS. THE CONTRACTOR SHALL EXPECT TO ENCOUNTER BURIED ELECTRICAL AND COMMUNICATION WIRING, WITH OR WITHOUT CONDUITS, SMALL PIPING, AND FIELD TILE WHILE DIGGING ON THIS SITE; AND SHALL INCLUDE COSTS IN THE BID TO REPLACE, REPAIR OR RELOCATE SUCH WIRING, CONDUITS, TILE, AND PIPING WHICH ARE DAMAGED OR IN CONFLICT WITH NEW WORK.
2. ALL LOCATIONS, SIZES AND INVERTS OF EXISTING UTILITIES AND YARD PIPING ARE SHOWN BASED ON THE BEST INFORMATION AVAILABLE. HOWEVER, WESSLER ENGINEERING DOES NOT GUARANTEE OR ASSURE THAT SUCH INFORMATION IS TRUE OR EVEN APPROXIMATE. THE CONTRACTOR SHALL DETERMINE WHICH UTILITIES MAY CONFLICT WITH HIS WORK AND VERIFY, AT A MINIMUM BUT NOT LIMITED TO, THE LOCATIONS, MATERIALS, SIZES, AND INVERTS. THE CONTRACTOR SHALL ADJUST HIS WORK ACCORDINGLY, AND NOTIFY WESSLER ENGINEERING OF ANY SUCH CONFLICTS AND RESOLUTION. THE CONTRACTOR SHALL REFER TO APPLICABLE SECTIONS OF THE SPECIFICATIONS RELATIVE TO THE ABOVE.
3. THE CONTRACTOR SHALL VERIFY THE LOCATION, MATERIAL AND SIZE OF EACH EXISTING UTILITY SERVICE PROVIDED TO THE SITE WITH THE RESPECTIVE UTILITY COMPANIES, AND ADJUST HIS WORK ACCORDINGLY. THE CONTRACTOR SHALL PROVIDE WESSLER ENGINEERING RECORD DRAWING INFORMATION OF EACH EXISTING UTILITY SERVICE LOCATED.
4. COMPLETELY REMOVE UNDERGROUND PIPING, THAT HAS PREVIOUSLY BEEN TAKEN OUT OF SERVICE OR IS BEING TAKEN OUT OF SERVICE UNDER THIS CONTRACT, IN CONFLICT WITH NEW WORK. UNLESS OTHERWISE NOTED ON THE DRAWINGS, ABANDONED UNDERGROUND PIPING NOT IN CONFLICT WITH NEW WORK MAY BE LEFT IN PLACE. DO NOT LEAVE PIPING ABANDONED UNDER THIS CONTRACT LIVE. SEE SPECIFICATION SECTION 02050 FOR DEMOLITION PROCEDURES. SEE SECTION 01550 FOR PLANT OPERATIONS DURING CONSTRUCTION FOR COORDINATION OF DEMOLITION WORK AND NEW CONSTRUCTION.
5. ALL EXISTING PIPING MAY NOT BE SHOWN. THE CONTRACTOR SHALL REFERENCE EXISTING RECORD DRAWINGS ON FILE WITH THE OWNER AND WESSLER ENGINEERING FOR ADDITIONAL INFORMATION OF EXISTING PIPING AND CONDUIT THROUGHOUT THE PLANT SITE.
6. NEW PIPING CARRYING LIQUIDS SHALL HAVE MINIMUM COVER AS DEFINED IN THE MISCELLANEOUS SITE DETAILS, UNLESS SPECIFIC ELEVATIONS ON THE DRAWINGS INDICATE OTHERWISE.
7. ALL EQUIPMENT TO BE REMOVED THAT HAS ELECTRICAL COMPONENTS, CONDUIT AND WIRING, AND/OR SMALL PIPING CONNECTED TO IT SHALL HAVE THE ELECTRICAL COMPONENTS AND SMALL PIPING REMOVED BACK TO THE SOURCE.
8. THE CONTRACTOR SHALL BE RESPONSIBLE FOR BRACING AND/OR PROTECTING ALL UTILITY POLES AND EXISTING STRUCTURES ADJACENT TO NEW EXCAVATIONS. UTILITY POLE BRACING SHALL BE AS DIRECTED BY THE GOVERNING UTILITY COMPANIES.
9. THE CONTRACTOR IS RESPONSIBLE FOR REPAIRING, RESTORING, OR REPLACING ALL PAVEMENT IN STREETS AND DRIVES OUTSIDE AND WITHIN THE CONSTRUCTION LIMITS WHICH IS DAMAGED BY CONSTRUCTION ACTIVITIES AND TRAFFIC, AND SHALL INCLUDE ALL SUCH COSTS IN HIS BID.
10. THE CONTRACTOR SHALL INSPECT THE SITE PRIOR TO BIDDING THE PROJECT TO SEE THE EXTENT OF THE DEMOLITION WORK INVOLVED AND TO INCLUDE THE NECESSARY WORK IN HIS BID.
11. THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONTACTING EACH PERMIT ISSUING AGENCIES WITHIN THE TIME PERIOD SPECIFIED BY THAT AGENCY PRIOR TO BEGINNING CONSTRUCTION.
12. THE CONTRACTOR SHALL REFER TO SPECIFICATION SECTION 02101 FOR EROSION AND DUST CONTROL DURING CONSTRUCTION.
13. THIS PROJECT REQUIRES THE REMOVAL OF EQUIPMENT, SOME OF WHICH HAVE ASSOCIATED MERCURY FILLED COMPONENTS INCLUDING, BUT NOT LIMITED TO, GAUGES AND CONTROLS. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO REMOVE AND DISPOSE OF ALL MERCURY FILLED COMPONENTS DESIGNATED FOR REMOVAL WITHIN FEDERAL, STATE AND LOCAL REGULATIONS.
14. THE CONTRACTOR SHALL PROTECT ALL BUILDING SUMP PUMPS FROM CONTRUCTION DEBRIS THROUGHOUT THE COURSE OF CONSTRUCTION.
15. THE CONTRACTOR SHALL COMPLETELY CLEAN ALL FLOOR DRAINS AND DRAIN PIPING, IN EACH EXISTING BUILDING THAT HAS HAD CONSTRUCTION ACTIVITY, TO REMOVE ALL CONSTRUCTION DEBRIS. CONSTRUCTION DEBRIS IN DRAIN PIPING SHALL BE FLUSHED TO THE NEAREST SITE MANHOLE, THEN COMPLETELY REMOVED.

Wastewater Treatment Plant Design Summary

Warsaw Wastewater Treatment Plant — **NPDES Permit No. IN0060917**

Component	Description	Design Parameters
Influent Characteristics	Average Daily Flow (ADF)	6.00 MGD
	Peak Hourly Flow (PHF)	18.00 MGD
	CBOD5	220 mg/L
	TSS	220 mg/L
	NH3-N	25.0 mg/L
	Phosphorus	5.0 mg/L
Influent Screening	Mechanical Cylindrical	Two (2) @ 0.25-inch bar spacing:
	Fine Screens (existing)	12.0 MGD peak capacity, each
	Manual Bypass Bar	1.75-inch O.C. bar spacing
Grit Removal	Aerated Grit	20.0 MGD with Air Lift Grit Transport
		Two (2) @ 21-ft x 21-ft, 14-ft SWD
Primary Clarifiers	Number and Size	Two (2) at 85-ft diameter, 12-ft SWD
	Surface Area	5,675 sq.ft. per clarifier
	Surface Overflow Rate	529 gpd/sf @ ADF
		1,586 gpd/sf @ PHF
Oxidation Ditch (existing)	Volume	Two (2) @ 1,460,000 gallons each
	Detention Time	11.7 hours at ADF
		3.89 Hours at PDF
	Organic Loading	18.3 lb BOD/1,000 cu.ft.
	Solids Retention Time	11.4 days
	Aeration Blowers	Two (2) at 4,600 scfm each (Turbo)
		One (1) at 1,400 scfm (Centrifugal)
Sludge Pump Station #1 (existing)	RAS Pumps	Two (2) at 2,800 gpm each
	WAS Pumps	Two (2) at 370 gpm each
	Scum Pump	One (1) at 150 gpm
Sludge Pump Station #2	RAS Pumps	Two (2) at 2,800 gpm each
	Scum Pump	One (1) at 150 gpm
Final Clarifiers (2 existing)	Number and Size	Three (3) at 90-ft diameter, 14-ft SWD
	Surface Area	6,362 sq.ft. per clarifier
	Surface Overflow Rate	314 gpd/sq.ft. @ ADF
		943 gpd/sq.ft. @ PHF
Disinfection	Type	Ultraviolet
	Channel Size	23.00-ft x 2.00-ft x 5.42-ft max WSE
	UV Transmittance	65% UVT
	Level Control	Serpentine weir
Post-Aeration (existing)	Post-Aeration Basins	Four (4) 5-Hp Surface Aerators
	Post-Aeration Cascade	4-step cascade

Component	Description	Design Parameters
Receiving Stream	Name	Tippecanoe River
	Tributary to	Wabash River
	Stream Uses	Full Body Contact Recreation
	7-day, 1-in-10 year low flow	3.1 cfs
	100-Yr Flood Elevation	810.00-ft
Phosphorus Removal	Anaerobic Selector Tanks	Two (2) at 39.5-ft x 42.5-ft x 13.5-ft SWD
Biological		One (1) at 35-ft x 35-ft x 13.5-ft SWD
	Total Volume	283,000 gallons
	Detention Time @ ADF	69 minutes
Chemical	Chemical	Alum
	Design Dosage	5.5 ppm
	Peristaltic Feed Pumps	Three (3) at 52 gph each
	Storage Tanks	Two (2) at 4,050 gallons each
	Secondary Containment	11,380 gallons
	Application Points	Grit Effluent Box &
		Oxidation Ditch #1 & #2 Effluent Boxes
Anaerobic Digestion	Number and Size	Two (2) at 60-ft dia. x 21-ft SWD
	Volume	472,000 gallons each
	Organic Loading	62.2 lb VS/day/1000 cu.ft.
	Detention Time	26.4 days
Sludge Holding Tanks	WAS	45-ft x 22.5-ft SWD, 267,670 Gal
	Digested Sludge	45-ft x 22.5-ft SWD, 267,670 Gal
	Septage	45-ft x 22.5-ft SWD, 267,670 Gal
Gravity Belt Thickener (existing)	Number and Capacity	One (1): 470 gpm, 930 lb/hr
Volute Press Dewatering	Number and Capacity	One (1): 260 gpm, 2,650 lb/hr
Stand-by Generator (existing)	Number and Size	One (1) 900-kW
Flow Meters	Raw Sewage:	
	- Center Street LS	20" MagMeter
	- Anchorage FM	18" MagMeter
	- Danek FM	10" MagMeter
	Effluent	2.0' Parshall Flume
	Primary Sludge	6" MagMeter
	RAS	Two (2) 12" MagMeters
	WAS	4" MagMeter
	Digester Sludge	Two (2) 4" MagMeters
	Digested Sludge	6" MagMeter
	Gravity Belt Thickener Feed	6" Mag Meter
	TWAS	4" MagMeter
	Volute Press Feed	4" Mag Meter

PROFILE NOTES:
1. ELEVATIONS SHOWN HERE ARE BASED ON TOP OF STRUCTURE ELEVATIONS AS DETERMINED FROM THE WESSLER ENGINEERING SITE SURVEY. THESE DIFFER FROM THE ELEVATIONS SHOWN ON THE ORIGINAL DESIGN DRAWINGS.
2. THE MAXIMUM WATER SURFACE ELEVATIONS ARE SHOWN AT A PEAK HOURLY DESIGN FLOW OF 18 MGD INFLUENT FLOW, PLUS 7.2 MGD RAS FLOW WITH ALL PROCESSES IN SERVICE.
3. THE 100 YEAR FLOOD ELEVATION IS AS DETERMINED FROM THE FEMA FLOOD MAPS.

GENERAL STRUCTURAL NOTES

All notes hereafter are typically applicable unless otherwise noted on plans, sections or details.

GENERAL

The structure has been designed for the in–service loads only. The methods, procedures, and sequences of construction are the responsibility of the Contractor. Supporting formwork for the concrete construction shall not be removed before the concrete has gained sufficient strength to safely support the dead and superimposed loads which will be subsequently applied. The Contractor shall take all necessary precautions to maintain and ensure the integrity of the structure at all stages of construction.

Refer to the architectural, civil, and process drawings for additional information.

All work shall be performed in accordance with the Indiana Building Code, 2014 Edition (2012 International Building Code, first printing, with Indiana Amendments).

Where new work is to be fitted to old work, the Contractor shall check all dimensions and conditions in the field, and report any errors or discrepancies to the Structural Engineer prior to the fabrication and erection of any new members. The Contractor shall be responsible for the correctness and fit of the new parts to the old parts.

Do not determine dimensions by "scaling" off the plans. The Contractor shall accept all risk associated with "scaling" and shall be responsible for all inadequate work resulting therefrom. Questions regarding missing or conflicting dimensions shall be directed, in writing, to the Structural Engineer.

Existing materials to be removed and reinstalled as part of this contract, but become damaged, shall be replaced with approved new material of equivalent quality and appearance at the Contractor's expense.

All work shall be performed without damage to adjacent retained work. Adequate protection of areas nearby work against dust, dirt and debris accumulation shall be maintained at all times.

Principal openings in the structure are indicated on the structural drawings. Refer to the architectural, mechanical, electrical, and plumbing drawings for sleeves, curbs, inserts, etc. not herein indicated. Openings in slabs with a maximum side dimension or diameter of 10 inches or less shall not require additional framing or reinforcement, unless noted otherwise. The location of sleeves or openings not shown in structural members shall be approved by the Structural Engineer.

The location of sleeves or openings not shown in structural members shall be approved by the Structural Engineer.

The Contractor shall relocate all mechanical piping, ducts, equipment, electrical conduits, wiring and plumbing that interfere with the proposed construction. Service shall be maintained to all equipment that is served by mechanical, electrical or plumbing conduit being relocated.

The shoring and/or re–shoring design is the responsibility of the Contractor. Temporary shoring for slabs, beams, and girders shall be adequate to carry the total weight of the slab–beam–girder system and any temporary construction loads to be imposed on the structural system. Shoring for a level shall not be removed until the concrete at that level has attained the specified 28 day compressive strength (f'c). Removal of shoring and/or reshoring shall not cause overstress in any structural element.

Opening dimensions shown on the plans and elevation views are nominal rough openings. It shall be the Contractor's responsibility to coordinate the specific clear opening dimension with the selected door manufacturer and door installer. Clear opening dimension shall account for any shimming and construction tolerances needed by the Contractor to complete their work. Refer to the Architectural plans for door locations and sizes.

FOUNDATIONS

Exterior footings shall bear 3'–0" minimum below finish grade and shall bear on undisturbed soil.

Foundation excavation and all other soils related work shall be performed in accordance with the geotechnical engineering report prepared by Earth Exploration, Inc. dated December 4, 2017 and all associated supplements.

Foundation and soils related work shall be performed under the direct supervision of a qualified Geotechnical Engineer.

Foundation excavations shall be made to plan elevations. The Contractor shall have a qualified Geotechnical Engineer verify that the allowable soil bearing pressure meets or exceeds that assumed for the foundation design. If the underlying soils are found to be unacceptable, one of the following procedures shall be followed:

- Remove the unacceptable soil and backfill with an engineered structural fill as directed by the inspecting Geotechnical Engineer.
- Lower the footing to an acceptable soil. Contact the Structural Engineer for potential modifications to the foundation system.

Subgrade structural elements subjected to differential lateral soil pressure shall be adequately braced until the structural elements which provide lateral restraint have been placed and allowed to cure for a minimum of 7 days, or until the concrete has achieved 75% of its specified compressive strength, whichever is more unless noted otherwise.

Excavations for spread footings, combined footings, continuous footings and/or mat foundations shall be cleaned and hand tamped to a uniform surface. Foundation excavations shall be adequately protected against detrimental change in condition from disturbance, rain, freezing, etc. Surface runoff shall not be allowed to enter the excavation.

Foundation conditions noted during construction, which differ from those described in the geotechnical report shall be reported to the Structural Engineer and Geotechnical Engineer before further construction is attempted.

Center all column and wall footings under the column or wall above unless otherwise indicated.

CONCRETE

Reinforced concrete has been designed in accordance with the latest edition[s] of the Building Code Requirements for Reinforced Concrete (ACI 318) and Environmental Engineering Concrete Structures (ACI 350) by the American Concrete Institute (ACI).

Slabs–on–grade shall be constructed in accordance with the latest edition of the Guide for Concrete Floor and Slab Construction (ACI 302.1R).

Mixing, transporting, and placing of concrete shall conform to the latest edition of the Standard Practice for Selecting Proportions for Normal, Heavyweight, and Mass Concrete (ACI 211.1) and the Standard Specifications for Structural Concrete (ACI 301). Concrete curing shall conform to the latest editions of the Standard Practice for Concrete Curing (ACI 308) and the Standard Specification for Curing Concrete (ACI 308.1). In case of a discrepancy, the plans and specifications shall govern.

Unless noted otherwise, concrete shall have natural sand fine aggregate and normal weight coarse aggregates conforming to ASTM C33, and Type I or III Portland Cement conforming to ASTM C150. The Contractor shall submit a mix design for each proposed class of concrete. Mix designs shall indicate proportions by weight, water–cement ratio, slump, air content, synthetic fiber size and quantity, sieve analyses of fine and coarse aggregates, standard deviation analysis, and required average strength and documentation of average strength verifying compliance with ACI 318. The Contractor shall not vary from the mix design without approval from the Structural Engineer.

Unless noted otherwise, fly ash may be used as a pozzolan to replace a portion of the Portland Cement in a concrete mix. Fly ash, when used, shall conform to ASTM C618, Type C. Concrete mixes using fly ash shall be proportioned to account for the properties of the specific fly ash used and to account for the specific properties of the fly ash concrete thus resulting. The ratio of the amount of the fly ash to the total amount of fly ash plus cement in the mix shall not exceed 25 percent.

Water–reducing admixtures conforming to ASTM C494 may be used in the concrete mix design. Maximum slump shall be 5 inches for mixes containing water–reducing admixtures and 5 to 8 inches for mixes containing high range water–reducing admixtures.

Concrete compressive strength tests shall be performed in accordance with ASTM C39. The tests shall be performed by an independent testing company at the Contractor's expense. Copies of the test results shall be forwarded to the Structural Engineer. One set of specimens shall be taken for each day's pour of appreciable size and for each 50 cubic yards in accordance with the latest edition of ASTM C31. Each set shall include one specimen tested at 7 days, 2 specimens tested at 28 days and one specimen retained in reserve. These test cylinders shall be laboratory cured.

When the ambient temperature is expected to fall below 40 degrees during the course of a concrete pour or subsequent curing period, it shall be placed and cured in accordance with the latest edition of Cold Weather Concreting (ACI 306R) and an additional set of concrete test cylinders shall be made. These cylinders shall be stored immediately adjacent to, and cured under the same conditions as the building concrete. Special curing boxes are not permitted for these test cylinders.

Concrete mixed, transported, placed, and cured under conditions of high ambient temperature, low humidity, solar radiation, or high winds shall conform to the latest edition of Hot Weather Concreting (ACI 305R) and an additional set of concrete test cylinders shall be made. These cylinders shall be stored immediately adjacent to, and cured under the same conditions as the building concrete. Special curing boxes are not permitted for these test cylinders.

Slump tests shall be made prior to and following the addition of plasticizers. Where concrete is placed by pumping methods, concrete for test cylinders and slump tests shall be taken at the point of final placement.

Water shall not be added to the concrete at the job site. The Contractor is responsible for coordinating a pumpable and workable mix without the addition of water at the job site. The use of plasticizers, retardants and other additives shall be at the option of the Contractor subject to the approval of the Structural Engineer. Follow the recommendations of the manufacturer for the proper use of additives. Use of calcium chloride or other chloride bearing salts is prohibited.

Place concrete in a manner so as to prevent segregation of the mix. Delay floating and troweling operations until the concrete has lost surface water sheen or all free water. Do not sprinkle free cement on the slab surface. Finishing of slab surfaces shall conform to the latest editions of ACI 302.1R and ACI 304R (Guide for Measuring, Mixing, Transporting and Placing Concrete).

Where an epoxy adhesive is specified for bonding plastic concrete to hardened concrete, it shall conform to the latest edition of the Standard Specification for Bonding Plastic Concrete to Hardened Concrete with a Multi–Component Epoxy Adhesive (ACI 503.2).

Maintain concrete in a moist condition for at least 3 days at ambient temperatures above 70 degrees, and at least 5 days at ambient temperatures above 50 degrees. Curing compounds or moisture retention covers shall be used for all non–formed surfaces. Formed surfaces shall be cured by leaving forms in place. During hot weather, keep forms moist by sprinkling. When forms are removed prior to the end of the curing period, apply curing compound to the exposed surfaces. It shall be the Contractor's responsibility to provide a curing compound compatible with other project requirements.

All interior slabs shall receive a hard "troweled finish". Exterior slabs, sidewalks, and stoops shall receive a "broom (or other type of slip resistant) finish". All formed surfaces not exposed to public view shall receive a "rough form finish", exposed surfaces shall receive a "smooth form finish". Concrete finishes shall be as defined in ACI 301.

Protect finished concrete surfaces from damage, rain, hail, running water, other injurious effects.

Protect the concrete surface between finishing operations on hot, dry days or any time plastic shrinkage cracks could develop by using wet burlap, plastic membranes or fogging.

Construction joints at locations shall be submitted to the Structural Engineer for approval.

Construction joints shall be prepared by roughening the contact surface in an approved manner to a full amplitude of approximately 1/4 inch leaving the contact surface clean and free of laitance.

Control joints shall be made in concrete slabs–on–grade at major column centerlines, at points of discontinuity, at reentrant corners, and at other locations shown on the plans.

Provide 3/4 inch chamfers on all exposed corners of concrete except those abutting masonry.

The Contractor shall verify the location of sleeves, openings, embedded items, etc. and shall ensure that they are in place prior to the placement of the concrete.

Earth cuts shall not be used as forms ("bank forming") for vertical or sloping surfaces unless otherwise approved by the Structural Engineer. Where bank forming is permitted, the concrete element shall be increased at least 3 inches on all sides exposed to earth to account for possible soil contamination during concrete placement.

CONCRETE SCHEDULE

CLASS	28 DAY COMPRESSIVE STRENGTH	AIR CONTENT	MIN. CEMENT LB/CY (SACKS/CY)	MAX. WATER/CEMENT RATIO	CONCRETE LOCATION	REMARKS
A	4,500 psi	6% ± 1%	611 (6..5)	0.45	Foundation Walls, Spread Footings Wall Walls	
B	4,000 psi	≤ 3%	517 (5.5)	0.48	Interior Slabs on Grade	
C	4,500 psi	6% ± 1%	611 (6.5)	0.42	Retaining Walls, Basement Walls, Tank Mat Foundations, Tank Structural Slabs, Tank Walls, Base Slabs, Slab floor systems	Crystalline Waterproofing Admixture
D	4,500 psi	6% ± 1%	611 (6.5)	0.40	Exterior Slabs on Grade, Stoops, & Sidewalks	Synthetic Fibers (1.5 lbs/cyds)
E	5,000 psi	6% ± 1%	658 (7.0)	0.48	High Volume Grout	Synthetic Fibers (1.5 lbs/cyds)

REINFORCING STEEL

Reinforcing bar detailing, fabricating, and placing shall conform to the latest edition of the following standards: Specifications for Structural Concrete for Buildings (ACI 301), ACI Detailing Manual (SP66). The latest editions of Concrete Reinforcing Steel Institute's Reinforcing Bar Detailing and Placing Reinforcing Bars may also be used.

Provide standard bar chairs, slab bolsters, spacers, etc. as required to maintain concrete protection specified. Reinforcing steel shall be tied to prevent displacement during concrete placement. Pulling up of welded wire fabric in slabs–on–grade on a metal deck is not permitted.

Reinforcement bars shall not be tack welded, welded, heated or cut unless otherwise indicated or approved by the Structural Engineer.

Welding of reinforcement bars, when approved by the Structural Engineer, shall conform to the latest edition of American Welding Society Standard D1.4. Electrodes for shop and field welding of reinforcement bars shall conform to ASTM A233, Class E90XX.

Concrete cover over reinforcement, unless otherwise noted, shall be as specified in the latest edition[s] of ACI 318 and ACI 350 with the most stringent requirements governing.

Welded wire fabric in slabs–on–grade shall be placed 2" down from the top of the slab unless otherwise noted. Welded wire fabric in slabs on metal deck shall be placed anywhere from 3/4" to 1 1/4" down from the top of the slab unless otherwise noted.

Unless noted otherwise, splicing of reinforcing bars shall conform to the latest edition of ACI 318. Where the length of lap is not indicated, provide a Class "B" lap at tension splices or 30 bar diameter compression laps at compression splices.

CONCRETE REINFORCING STEEL LAP SPLICE SCHEDULE

BAR SIZE	TENSION SPLICE		COMPRESSION SPLICE
	TOP BAR	OTHER	
#3	21"	16"	12"
#4	28"	24"	15"
#5	35"	30"	19"
#6	42"	36"	23"
#7	49"	42"	26"
#8	56"	48"	30"
#9	63"	57"	34"
#10	76"	66"	38"
#11	93"	72"	42"

Horizontal bars in walls, masonry bond beams, and continuous wall footings shall be bent at corners and intersections in such a way that continuity is provided through the joint. Separate corner bars of the same size and spacing as the horizontal reinforcing may be substituted for the bent portion of the continuous bars.

Unless noted otherwise, provide 2–#5 bars (one each face) around unframed openings and diagonally at reentrant corners of vertical height offsets in concrete walls. Place bars parallel to the sides of the opening and extend 24 inches beyond corners.

The Contractor shall prepare detailed working or shop drawings to enable him to fabricate, erect and construct all parts of the work in accordance with the drawings and specifications and shall submit one reproducible copy and one blue line copy to the Structural Engineer for review prior to fabrication. These shop drawings will be reviewed for design concepts only. The Contractor shall be responsible for all dimensions, accuracy, and fit of work.

MASONRY

Engineered concrete masonry has been designed in accordance with the latest edition of the ACI Building Code Requirements for Masonry Structures (ACI 530/ASCE 5).

Concrete masonry construction shall conform to the latest edition of the ACI Specifications for Masonry Structures (ACI 530.1/ASCE 6).

Structural masonry construction shall inspected by a qualified independent "special inspector" in accordance with Section 1704.5 of the 2006 International Building Code, third printing. In the absence of an Owner's special inspection program, costs of inspection shall be borne by the Contractor.

Mortar shall be type N for interior non–load bearing walls. For exterior and load bearing walls, mortar shall be type M below grade and type S above grade. Mortar shall conform to the requirements of the latest edition of ASTM C270. Portland Cement–lime without air entrainment shall be used in the mortar mix.

Provide standard spacers, etc. as required to prevent reinforcing steel displacement during grout placement.

Provide reinforcing steel in vertical cores as indicated. In addition, provide reinforcing steel in vertical cores on each side of all openings and each corner of all walls. Grout cores with reinforcing steel solid.

Reinforcing steel lap splices in concrete masonry shall be 60 bar diameters (minimum) unless otherwise noted. All splices shall be wired together.

Masonry cores (where specified) and bond beams shall be filled with coarse grout conforming to the requirements of the latest edition of ASTM C476 and having a minimum 28–day compressive strength of 3,000 psi, 3/4 inch maximum aggregate, and an 8 to 11 inch maximum slump.

Bearings for beams, lintels, joists, etc. shall be bond beams or hollow masonry units with cores filled solid with grout. The minimum bearing length shall be 8 inches unless otherwise indicated.

The Contractor shall prepare detailed working or shop drawings to enable him to fabricate, erect and construct all parts of the work in accordance with the drawings and specifications and shall submit one reproducible copy and one blue line copy to the Structural Engineer for review prior to fabrication. These shop drawings will be reviewed for design concepts only. The Contractor shall be responsible for all dimensions, accuracy, and fit of work.

MASONRY REINFORCING STEEL LAP SPLICE SCHEDULE

f'm = 2,000 psi

BAR SIZE	#3	#4	#5	#6	#7	#8
8" CMU	1'–6"	2'–0"	2'–6"	4'–6"	5'–9"	8'–6"

STRUCTURAL STEEL

Structural steel detailing, fabrication and erection shall conform to the latest editions of the AISC Specification for Structural Steel Buildings, Allowable Stress Design and Plastic Design and the AISC Code of Standard Practice for Steel Buildings and Bridges.

Erector shall maintain minimum temporary bracing at each bay in each direction until the roof diaphragm and permanent lateral load resisting system construction are complete.

Structural steel shall be shop–painted with a rust inhibiting primer. Steel which will be exposed to weather shall receive one additional finish coat. Steel that will be normally visible to the building's occupants or exposed to weather shall receive a field applied finish coat matching the existing surrounding surfaces. All abrasions caused by handling after shop painting shall be touched–up after erection is complete.

Design connections not shown in accordance with the latest AISC Specification and Manual of Steel Construction (allowable stress design method). Design simple span non–composite beam connections not shown to support one–half the beam load capacity as given in the AISC Uniform Load Constants for Beams Laterally Supported tables. Connection angles shall be double web angles, 5/16" minimum thickness.

Unless otherwise noted, bolted connections for structural steel members shall be bearing–type using 3/4" diameter ASTM A325 high strength bolts with standard 13/16" diameter holes tightened to the snug tight condition.

High strength bolted connections shall conform to the latest edition of the Specification for Structural Joints Using ASTM A325 or A490 Bolts, approved by the Research Council on Structural Connections of the Engineering Foundation.

Welding procedures shall conform to the latest edition of the American Welding Society's (AWS) Structural Welding Codes for: Steel ANSI/AWS D1.1 and Sheet Steel ANSI/AWS D1.3.

Welded connections using ASTM A572 and A992 steel as a base metal shall be made with E70XX Low Hydrogen electrodes. Unless otherwise noted, other welded connections shall be made with regular E70XX electrodes. Welding shall be performed only where shown and to the extent indicated.

Field drilled holes shall be reamed, cleaned and deburred prior to assembly of the connection.

Thermal cutting shall preferably be done by machine. Hand thermally cut edges which will be subjected to substantial stress, or which are to have weld metal deposited on them, shall be reasonably free from notches or gouges. Notches or gouges greater than 3/16" that remain from cutting shall be removed by grinding. Re–entrant corners shall be shaped notch–free to a radius of at least 1/2".

Paint on surfaces adjacent to joints to be field welded shall be wire brushed to reduce the paint film to a minimum.

Surfaces within 2" of any field weld shall be free of materials that would prevent proper welding or produce toxic fumes while welding is being done.

Splicing of structural steel members where not detailed is prohibited without the prior approval of the Structural Engineer as to location, type of splice and connection to be made.

Beams with specified camber shall be cambered upward. Beams without specified camber shall be fabricated so that after erection any minor camber due to rolling or shop assembly is upward.

Unless otherwise noted, provide a 5/8" thick steel bearing plate with two 1/2" diameter x 0'–6" stud anchors at the ends of steel beams bearing on concrete or masonry supports.

Continuous beam cantilevers and other beams framing over the top of a column shall have a full height 3/8" web stiffener on each side of the beam, centered above the supporting column. The beam–to–column connection shall contain no less than 4 bolts (2 each side of beam).

The Contractor shall prepare detailed working or shop drawings to enable him to fabricate, erect and construct all parts of the work in accordance with the drawings and specifications and shall submit one reproducible copy and one blue line copy to the Structural Engineer for review prior to fabrication. These shop drawings will be reviewed for design concepts only. The Contractor shall be responsible for all dimensions, accuracy, and fit of work.

POST–INSTALLED EXPANSION/ADHESIVE ANCHORS

Post–installed anchors shall be installed by qualified personnel in accordance with the drawings and specifications.

Post–installed anchors shall be installed by qualified personnel in accordance with the Manufacturer's Printed Installation Instructions (MPII), the drawings and specifications. Installation of adhesive anchors shall be performed by personnel trained to install adhesive anchors.

Post–installed anchors shall be as manufactured by Hilti Fastening Systems or approved equivalent.

Masonry cores receiving post–installed anchors shall be filled with course grout conforming to the requirements specified herein. Anchors shall not be installed in a masonry mortar joint.

The Contractor shall inspect the masonry or concrete surface at each proposed post–installed anchor location prior to installation. If the anchor locations align with mortar joints or the masonry or concrete is honeycombed, cracked or otherwise unsound, the anchors shall be repositioned so as to be located in sound material and be in accordance with the manufacturer's minimum spacing and edge distance requirements.

Adhesive anchors shall be subject to the following additional requirements:

Anchors shall meet the requirements of ACI 355.4.

Proof loading of adhesive anchors is not required.

Anchors shall not be installed in concrete cured less than 21–days

Anchors shall not be installed until the concrete has reached a minimum compressive strength of 2,500 psi.

Concrete temperature must be greater than 50 °F and less than 80 °F prior to installation of the anchors unless otherwise permitted by the MPII.

Anchors shall be installed in holes drilled with a rotary or rock drill. Follow the MPII for size and depth of holes required.

The acceptability of certification other than the ACI/CRSI Adhesive Anchor Installer Certification shall be the responsibility of the Structural Engineer. Adhesive anchors installed in horizontal or upwardly inclined orientations to resist sustained tension loads shall be continuously inspected during installation by an inspector specially approved for that purpose by the building official. The special inspector shall furnish a report to the licensed design professional and building official that the work covered by the report has been performed and that the materials used and the installation procedures used conform to the approved contract documents and MPII.

Installation of anchors shall be inspected in accordance with ACI 318–11, Section 1.3 and the Indiana Building Code.

NON–SHRINK GROUT

Grout shall be a high early strength, non–metallic, shrinkage resistant (when tested in accordance with the latest edition of ASTM C827 or CRD–C621), premixed, non–corrosive, non–staining product conforming to the requirements of the latest edition of ASTM C1107 and containing Portland Cement, silica sands, shrinkage compensating agents and fluidity improving compounds.

Grout compressive strength tests shall be performed in accordance with the latest edition of ASTM C109, with a restraining plate placed over the molds.

Grout shall be installed in accordance with the manufacturer's instructions.

Grout shall be pumped into place and shall have forms built around it for confinement.

CITY OF WARSAW, INDIANA

GENERAL STRUCTURAL NOTES PART 1

SHEET NO.
AS01
PAGE NO.
8

GENERAL STRUCTURAL NOTES (CONTINUED)

All notes hereafter are typically applicable unless otherwise noted on plans, sections or details.

STRUCTURAL LUMBER

Structural lumber shall be detailed, fabricated and erected in accordance with the latest editions of the Timber Construction Manual by the American Institute of Timber Construction (AITC) and the National Design Specification for Wood Construction by the American Forest & Paper Association (ANSI/NFoPA NDS).

Bolts, lag screws, nails and other wood fastenings, unless otherwise noted, shall conform to the latest edition of the National Design Specification for Wood Construction. Standard cut washers shall be used between the wood and bolt head and the wood and nut.

Wood construction connectors plates shall be as manufactured by Simpson Strong–Tie Company, Inc. or approved equivalent.

Except where epoxy injection is specified; bolted, lag screwed, or nailed wood member connections shall be glued using adhesives conforming to APA Specification AFG–01 (PL–400) in accordance with the manufacturer's recommendations.

Structural load bearing wall studs, not otherwise continuously braced on both sides by gypsum board, plywood/performance rated panel sheathing, hardboard panel siding, or other Indiana Building Code (IBC) approved sheathing; shall be braced at third points with horizontal solid wood blocking not less than 2 inches (nominal) in thickness and of the same width as the studs fitted snugly and nailed thereto to provide adequate lateral support.

Wood members that are in contact with concrete or masonry or exposed to weather shall be pressure treated with a water borne treatment to a net retention level of 0.3 pcf in accordance with applicable American Wood Preservers' Association latest requirements.

Rough sawn timbers shall be treated and finished where specified. Ends exposed to weather shall be treated with CCA.

PLYWOOD/PERFORMANCE RATED PANELS

Plywood and performance rated panels (oriented strand board) shall be detailed, fabricated and erected in accordance with the latest criteria established by the American Plywood Association (APA) including their latest edition of the Plywood Design Specification (and its Supplements).

Plywood panels shall be identified with the appropriate trademark of the APA and shall meet the requirements of the latest edition of the U.S. Product Standard PS 1 for Construction and Industrial Plywood. Performance rated panels shall be identified with the appropriate trademark of the APA and shall meet the requirements of the latest edition of the APA PRP–108 Performance Standards and Policies for Structural–Use Panels, or the U.S. Product Standard PS 2 for Wood–Based Structural–Use Panels.

Roof panels shall be installed with the long dimension (face grain) across the supports with panels continuous over two or more supports (minimum 3 span condition).

Stagger panel end joints. End joints shall only occur over a support. Unless recommended otherwise by the panel manufacturer, provide a 1/8" gap between panel ends and edges. Panel edges shall be tongue–and–groove or supported on 2" (nominal) lumber blocking installed between joists. Shear wall panel edges shall be supported on 2" (nominal) lumber blocking installed between studs.

METAL–PLATE–CONNECTED WOOD TRUSSES

Prefabricated wood trusses shall be detailed, fabricated and erected in accordance with the latest editions of the Timber Construction Manual by the American Institute of Timber Construction (AITC) and the National Design Specification for Wood Construction by the American Forest & Paper Association (ANSI/NFoPA NDS) and the latest criteria established by the Truss Plate Institute (TPI) and the Wood Truss Council of America (WTCA).

Temporary and permanent bracing of wood trusses shall be in accordance with the latest edition of the Commentary and Recommendations for Handling, Installing and Bracing Metal Plate Connected Wood Trusses (HIB) by the TPI.

Wood roof trusses shall be designed to support the following superimposed loads in addition to the weight of the trusses:

Top Chord Dead Load	10 psf
Top Chord Live Load	25 psf
Bottom Chord Dead Load	7 psf
Bottom Chord Live Load	0 psf
Wind Load (horizontal)	per code
Wind Load (net vertical)	per code

Deflection due to live load shall be limited to 1/360 of the truss span. For truss cantilevers, the deflection due to live load at the end of the cantilever shall be limited to 1/180 of the cantilever dimension.

Truss plates shall be galvanized steel and shall be applied to both faces of the members being connected.

Trusses shall conform to the geometry shown. Minimum lumber size for top and bottom chord members shall be 2"x 6" (nominal). Web member size and configuration shall be the option of the fabricator.

The truss manufacturer shall prepare detailed working or shop drawings and shall submit one reproducible copy and one blue line copy, including calculations, to the Structural Engineer for review prior to fabrication. Truss drawings and calculations shall show the design forces in the truss members, the sizes of the truss plates; the lumber species, commercial grade and normal duration design values; required bracing and details necessary to enable the truss manufacturer to fabricate, erect and construct all parts of the work in accordance with the drawings and specifications. These shop drawings will be reviewed for design concepts only. The truss manufacturer shall be responsible for all dimensions, accuracy, and fit of work. The trusses shall be designed by, and the shop drawings and calculations shall bear the seal and signature of, a registered professional engineer in the State of Indiana.

The contractor shall install all permanent truss bracing as shown on the truss manufacturer's shop drawings.

COORDINATION WITH OTHER TRADES

The Contractor shall coordinate and check all dimensions relating to architectural finishes, structural framing, mechanical openings, equipment, etc. The Structural Engineer shall be notified of any discrepancies before proceeding with work in an area under question.

SPECIAL NOTES TO THE OWNER

Under normal conditions and for conventional buildings/structures such as the subject structure, reinforced concrete will develop cracks. The cracks are due to inherent shrinkage of the concrete, creep, ambient temperature variation, and restraining effects of vertical and other structural elements.

The cracks formed are normally cosmetic. The concrete maintains its serviceability and strength requirements. It is possible that a number of hairline cracks, which would normally spread over a wide area, will integrate into a single crack with a width exceeding 0.01 inch. It is emphasized that although special effort is made to reduce the potential causes and number of such cracks, it is not practical to provide total articulation and thereby achieve complete inhibition of all cracks.

The majority of these cracks develop within the first three years of service. Cracks which are wider than 0.01 inch may require sealing or epoxy injection.

The object of the joints provided in the structure is to allow movement. Movements due to creep and shrinkage may be noticeable at joints up to two years after construction, beyond which movements due to variations in temperature will persist.

DESIGN

Building Code:
Indiana Building Code, 2014 Edition (2012 International Building Code, with Indiana Amendments)

Soil information:

Allowable net bearing pressure:	2,500 psf
Unit weight of soil	125 pcf
Effective Fluid Pressure	90 pcf
Coefficient of friction between soil and concrete footing	0.30 (assumed)
Subgrade Modulus	175 pci

Concrete:
28 day compressive strength (f'c) see schedule

Masonry:
28 day compressive strength (f'm) 1,500 psi

Reinforcing steel (deformed bars of new billet steel):

Stirrup and tie	ASTM A615, Grade 60
Welded wire fabric (smooth)	ASTM A185

Plywood/Performance Rated Panels:

Roof:	
Span Rating	24/16
Thickness	1/2"
Exposure	1

Non–shrink grout:
28 day compressive strength 5,000 psi

Live loads:
Roof: 25 psf with drift considerations

Floors:

Slab on Grade	100 psf
Tank Walkways	100 psf

Live Load Deflection Limitation:
Roof L/360

Wind loads:

Basic wind speed (3–second gust)	120 mph
Occupancy Risk Category	III
Exposure	C

Seismic loads:

Occupancy Risk Category	III
MCE Seismic Spectral Response Acceleration at Short Periods,	Ss 10.2% g
MCE Seismic Spectral Response Acceleration at 1 Second,	S1 6.0% g
Importance factor, IE	1.25
Site Class	D
Seismic Design Category	B

Structural Lumber (surfaced dry, used at 19% moisture content):

All members	Southern Pine, No. 2 (U.O.N)
Bolts/Lag Screws	ANSI/ASME B18.2
Nails	FF–N–105B

Laminated Veneer Lumber (LVL) (as manufactured by Weyerhauser):

Allowable Bending Stress	2,600 psi
Allowable Shear Stress	285 psi
Modulus of Elasticity (10^6 psi)	2.0E
Specific Gravity	0.50

ELECTRICAL SCHEMATICS

SHEET NO. **AE18**

PAGE NO. 27

VALVE SYMBOLS

- ECCENTRIC PLUG
- THREE - WAY
- BUTTERFLY
- BALL
- GLOBE
- PRESSURE RELIEF
- AIR RELEASE AND VACUUM RELIEF
- GATE
- KNIFE GATE
- CONSTANT VOLUME FLOW REGULATOR
- MUD
- BALL CHECK
- SWING CHECK
- SPLIT DISC CHECK
- REGULATED SIDE PRESSURE CONTROL
- PINCH
- DIAPHRAGM
- NEEDLE
- CALIBRATED BALANCE
- SOLENOID

GATE SYMBOLS

- SLUICE GATE
- SLIDE GATE
- FLAP GATE
- WEIR GATE
- STOP GATE
- WEIR AND STOP GATE

VALVE AND GATE POWER ACTUATOR SYMBOLS

- E XX — ELECTRIC MOTOR
- E 2 XX — ELECTRIC MOTOR WITH POSITIONER
- H 2 XX — HYDRAULIC WITH POSITIONER
- H 3 XX — HYDRAULIC WITH SOLENOID
- P 2 XX — PNEUMATIC WITH POSITIONER
- P 3 XX — PNEUMATIC WITH SOLENOID

XX: FC = FAIL CLOSED
FIP = FAIL INTERMEDIATE POSITION
FIP = FAIL TO LAST POSITION
FO = FAIL OPEN

NOTE: XX = FAIL POSITION ON LOSS OF PRIMARY POWER (PNEUMATIC OR ELECTRICAL)

FLOW ELEMENTS SYMBOLS

- WEIR PLATE
- PARSHALL FLUME
- ROTAMETER
- PROPELLER OR TURBINE METER
- ORIFICE METER
- CLAMP ON ULTRASONIC FLOWMETER
- MAGNETIC FLOWMETER
- VENTURI OR FLOW TUBE
- AREA VELOCITY FLOWMETER

MISCELLANEOUS SYMBOLS

- HARDWIRED INTERLOCK SEE SPECIFICATION
- MICROPROCESSOR BASED INTERLOCK SEE SPECIFICATION
- BLIND FLANGE OR CLEAN OUT
- AIR GAP
- STRAINER
- FLUSHING WATER CONNECTION
- SEAL WATER CONNECTION
- EJECTOR
- AUTOMATIC SAMPLER
- DIFFUSER
- BUBBLER LEVEL ELEMENT
- VENT
- RUPTURE DISK
- ORTHO PHOSPHATE ELEMENT
- PROBE
- ELECTRIC MOTOR
- MANUAL SAMPLE PORT
- AUTOMATIC DRAIN
- MANUAL GRAB SAMPLE
- DIAPHRAGM SEAL
- ANNULAR SEAL
- FLOW STRAIGHTENING VANE
- CALIBRATION CHAMBER
- DENSITY METER X: N - NUCLEAR O - OPTICAL U - ULTRASONIC
- SELF CONTAINED AIR SUPPLY
- PURGE SET X: W = WATER A = AIR
- SUBMERSIBLE MIXER
- AIR COMPRESSOR
- FLOATING MIXER
- FLAME TRAP AND THERMAL SHUTOFF ASSEMBLY
- FLOATING DECANTER
- TEMPERATURE GAUGE
- PRESSURE GAUGE GAUGE
- PRESSURE TRANSMITTER
- LEVEL SWITCH/FLOAT

LEVEL ELEMENTS SYMBOLS

- SUBMERSIBLE PRESSURE
- ULTRASONIC
- FLOAT
- NON-CONTACT RADAR
- CAPACITANCE FLOAT STICK

PUMP AND COMPRESSOR SYMBOLS

- SUBMERSIBLE PUMP
- CENTRIFUGAL BLOWER (CS-2)
- CENTRIFUGAL PUMP (DRY PIT) (CS-2)
- VERTICAL TURBINE PUMP (XX)
- PROGRESSING CAVITY PUMP
- LOBE PUMP, BLOWER OR COMPRESSOR (POSITIVE DISPLACEMENT) (XX)
- COMPRESSOR (PISTON)
- CHEMICAL FEED PUMP
- PLUNGER PUMP
- DIAPHRAGM PUMP
- PERISTALTIC PUMP

FLOW STREAM IDENTIFIERS

SEE PROCESS – MECHANICAL LEGEND

INPUTS AND OUTPUTS TO PLC OR DISTRIBUTED CONTROL

- ANALOG INPUT (X)
- ANALOG OUTPUT (X)
- PULSE INPUT (X)
- PULSE OUTPUT (X)
- DIGITAL INPUT (X)
- DIGITAL OUTPUT (X)

NOTE:
X = TOTAL NUMBER OF SIGNALS WHERE MORE THAN ONE SIGNAL IS REQUIRED. IF QUANTITY IS NOT SHOWN THEN ONE SIGNAL IS REQUIRED.

GENERAL NOTE:

1. THIS IS A STANDARD LEGEND. NOT ALL THE INFORMATION SHOWN ON THIS LEGEND IS USED IN THESE CONTRACT DRAWINGS.

GENERAL SITE NOTES:

1. ELEVATION INFORMATION SHOWN ON THESE PLANS, INCLUDING BENCH MARK ELEVATIONS, ARE BASED ON NGVD 1988 DATUM. NEITHER THE 2001 WASTEWATER TREATMENT PLANT, CONTRACT 9 PROJECT; NOR THE 2010 WASTEWATER TREATMENT PLANT BIOSOLIDS FACILITY IMPROVEMENTS, CONTRACT 17, BOTH PREPARED BY JONES & HENRY ENGINEERS, LTD, WERE PROVIDED WITH BENCH MARK OR DATUM INFORMATION.
2. EXISTING STRUCTURES HAVE BEEN SHOWN PER THE 2001 WASTEWATER TREATMENT PLANT, CONTRACT 9 PROJECT; THE 2008 WWTP LAB BUILDING CONTRACT 16 PROJECT; AND THE 2010 WASTEWATER TREATMENT PLANT BIOSOLIDS FACILITY IMPROVEMENTS, CONTRACT 17, ALL PREPARED BY JONES & HENRY ENGINEERS, LTD.
3. EXISTING UNDERGROUND WASTEWATER TREATMENT PROCESS PIPING, POTABLE WATER PIPING AND NON POTABLE WATER PIPING HAVE BEEN SHOWN PER THE 2001 WASTEWATER TREATMENT PLANT, CONTRACT 9 PROJECT; THE 2008 WWTP LAB BUILDING CONTRACT 16 PROJECT; AND THE 2010 WASTEWATER TREATMENT PLANT BIOSOLIDS FACILITY IMPROVEMENTS, CONTRACT 17, ALL PREPARED BY JONES & HENRY ENGINEERS, LTD. EXCEPT FOR EVIDENCE FOUND AT THE SURFACE THIS INFORMATION HAS NOT BEEN FIELD VERIFIED, AND ITS ACCURACY IS UNKNOWN.
4. PDF DRAWING FILES OF THESE THREE PREVIOUS PROJECTS ARE AVAILABLE FROM WESSLER ENGINEERING UPON WRITTEN REQUEST.
5. THE CONTRACTOR IS RESPONSIBLE FOR ALL MEANS AND METHODS OF PROTECTION AND STABILIZATION OF SOILS, BANKS, AND SLOPES OF ALL OPEN EXCAVATIONS FOR THE PROTECTION AND SAFETY OF THE WORK AND WORKERS. THE CONTRACTOR SHALL FAMILIARIZE THEMSELVES WITH THE SITE SOIL CONDITIONS DESCRIBED IN THE GEOTECHNICAL REPORT IN THE PROJECT MANUAL.
6. THE 100 YEAR AND 25 YEAR FLOODPLAIN ELEVATIONS ARE AS DEFINED ON SHEET NO. AG05.
7. NO CONTRACTOR ACTIVITIES OR STAGING OF EQUIPMENT SHALL TAKE PLACE OUTSIDE OF THE CONSTRUCTION LIMITS. THE CONSTRUCTION LIMITS SHALL BE DEFINED AS THE AREA WITHIN THE PROPERTY LINES FOR THE CITY OF WARSAW WASTEWATER TREATMENT PLANT.
8. REMOVE VALVE BOXES COMPLETE ON ALL EXISTING YARD PIPING DESIGNATED FOR REMOVAL AND/OR ABANDONMENT.

CONTROL BUILDING GENERAL DEMOLITION NOTES:

1. THE TOP OF WALL ELEVATION ALONG THE PLANT INFLUENT CHANNEL HAS BEEN SHOWN AT 825.50 ON THE 2001 WASTEWATER TREATMENT PLANT PROJECT, BY JONES & HENRY ENGINEERS, LTD. THE WESSLER ENGINEERING SITE SURVEY FOR THIS PROJECT DETERMINED THE TOP OF WALL ELEVATION TO BE 824.80. ALL EXISTING VERTICAL INFORMATION SHOWN FOR THIS STRUCTURE HAS BEEN REVISED TO AGREE WITH THE SITE SURVEY, WITH THE ASSUMPTION THAT VERTICAL DISTANCES REFERENCED ON THE JONES & HENRY DRAWINGS ARE ACCURATE.
2. EXISTING YARD PIPING SHOWN AROUND THIS STRUCTURE IS AS SHOWN ON THE 2001 WASTEWATER TREATMENT PROJECT, BY JONES & HENRY ENGINEERS, LTD; WITH SOME ADJUSTMENTS MADE FROM THE SITE SURVEY BY WESSLER ENGINEERING, FOR THIS PROJECT. INFORMATION AS PROVIDED ON THE JONES & HENRY DRAWINGS HAS NOT BEEN FIELD VERIFIED, OTHER THAN OBVIOUS DISCREPANCIES FOUND DURING THE WESSLER SURVEY.

GRIT TANK GENERAL NOTES:

1. THE WASTEWATER TREATMENT PLANT, CONTRACT 9 DRAWINGS, BY JONES & HENRY ENGINEERS, LTD, CORRECTED FROM CONSTRUCTION DATA IN JANUARY 2004, CALL FOR A MASONRY PLUG WITH A KNOCKOUT SECTION IN THE CONCRETE WALL ALONG THE STRUCTURE'S NORTH WALL, NORTH OF THE CHANNEL FOR EXISTING FINE SCREEN NO. 2. EXISTENCE OF MASONRY WITHIN THE WALL HAS BEEN FIELD VERIFIED, THE EXACT INSTALLED LOCATION HAS NOT.
2. ALL GRATING ALONG CHANNELS SHALL BE A MAXIMUM 4'–0" IN LENGTH FOR EASE OF REMOVAL DURING CLEANING. THE GRATING SECTION OVER STOP GATE NO. 1 SHALL BE A MAXIMUM 12" IN LENGTH FOR EASY ACCESS. THE GRATING SECTION OVER STOP GATES NO. 2 AND 3 SHALL BE THE SAME LENGTH AS THE WALL THICKNESS. SEE GRATING SUPPORT DETAILS ON SHEET NO. MC02.
3. ALL NEW DUCTILE IRON AIR PIPING AND FITTINGS SHALL BE PROVIDED WITHOUT CEMENT LINING.
4. FURNISH AND INSTALL QUICK CONNECT FITTINGS TO THE NEW 6" DI DRAIN DRAW DOWN PIPING WHICH WILL PROPERLY MATE UP TO THE EXISTING CITY OWN PORTABLE PUMP HOSES.

FOUNDATION PLAN NOTES: ○ INDICATES NOTE REFERENCED ON PLAN

1. SEE SHEET AS01 AND AS02 FOR GENERAL STRUCTURAL NOTES. SEE SHEETS MS01 TO MS04 FOR TYPICAL STRUCTURAL DETAILS.
2. SEE PROCESS DRAWINGS FOR ADDITIONAL REQUIREMENTS INCLUDING CONCRETE FILL, GROUT BEDS, PIPE PENETRATIONS, ETC.
3. SEE SITE CIVIL FOR FINAL GRADE ELEVATIONS.
4. SEE GEOTECHNICAL REPORT FOR ALL BACKFILLING AND COMPACTION REQUIREMENTS BEHIND WALLS AND UNDER SLAB-ON-GRADE.
5. ALL DIMENSIONS AND ELEVATIONS SHALL BE VERIFIED PRIOR TO FABRICATION, CONSTRUCTION, OR ERECTION. THE GENERAL CONTRACTOR SHALL ASSUME RESPONSIBILITY FOR ANY DISCREPANCIES.
6. ALL FOOTINGS ARE CENTERED BENEATH BEARING WALLS UNLESS NOTED OTHERWISE.
7. REFER TO CIVIL DRAWINGS FOR WALL LAYOUT, OPENING SIZES AND LOCATIONS.
8. CONTRACTOR TO PLACE 4 WALL MOUNTED PRESSURE RELIEF VALVES (P.R.V.). SEE DETAIL 11/MS01. PROVIDE 6" DIA. P.R.V. INSTALL P.R.V. 3'-0" ABOVE FOUNDATION SLAB, TYP. TWO P.R.V.s REQUIRED PER GRIT TANK. INSTALL P.R.V.S AT EXTERIOR WALLS ONLY.

OXIDATION DITCH GENERAL NOTES:

1. THE TOP OF THE LOWER WALL ELEVATION FOR THE OXIDATION DITCH HAS BEEN SHOWN AT 821.50, AND THE TOP OF WALL ELEVATION FOR GATE CHAMBER NO. 1 HAS BEEN SHOWN AT 821.00, ON THE 2001 WASTEWATER TREATMENT PLANT PROJECT, BY JONES & HENRY ENGINEERS, LTD. THE WESSLER ENGINEERING SITE SURVEY FOR THIS PROJECT DETERMINED THE TOP OF WALL ELEVATION TO BE 820.75 FOR THE OXIDATION DITCHES AND 820.25 FOR GATE CHAMBER NO. 1. ALL VERTICAL INFORMATION SHOWN FOR THIS STRUCTURE HAS BEEN REVISED TO AGREE WITH THE SITE SURVEY, WITH THE ASSUMPTION THAT VERTICAL DISTANCES REFERENCED ON THE JONES & HENRY DRAWINGS ARE ACCURATE.
2. EXISTING BELOW GRADE PIPING SHOWN ON THE DRAWINGS FOR AREA D IS AS SHOWN ON THE WASTEWATER TREATMENT PLANT, CONTRACT 9 PROJECT, BY JONES & HENRY ENGINEERS, LTD., CORRECTED FROM CONSTRUCTION DATA IN JANUARY 2004. THIS INFORMATION HAS NOT BEEN VERIFIED.
3. FIELD VERIFY ALL GATE CHAMBER DIMENSIONS PRIOR TO THE CONSTRUCTION OF NEW FEATURES. COORDINATE WITH THE ENGINEER FOR ANY REQUIRED FIELD ADJUSTMENTS TO THE INSTALLATIONS.

SECTION B EC17

0 2 4 8 FT 1/4"=1'-0"

NEW DRAIN PUMP STATION GENERAL NOTES:

1. THE PLANT DRAIN PUMP EQUIPMENT INCLUDING PUMPS, GUIDE RAILS AND SUPPORT BRACKETS SHALL BE FURNISHED BY THE SAME MANUFACTURER. SEE SPECIFICATION SECTION 11200. PUMP CONTROLS AND CONTROL PANELS SHALL BE AS DESCRIBED IN ELECTRICAL DRAWINGS AND IN SPECIFICATION SECTION 11200.
2. INSTALL CONCRETE FILLET INTO THE BOTTOM OF THE WET WELL PER PUMP MANUFACTURER'S RECOMMENDATIONS.
3. THE WET WELL TOP SLAB SHALL BE PRECAST REINFORCED CONCRETE BY THE SAME MANUFACTURER AS THE BARREL SECTIONS. THE ACCESS HATCH SHALL BE INCLUDED IN THE CASTING OF THE TOP SLAB. THE HATCH SHALL BE INSTALLED ALONG THE CENTERLINE OF THE STRUCTURE, CENTERED AND ALIGNED PARALLEL TO THE PUMP DISCHARGE PIPING.
4. PIPE ELEVATIONS FOR THE DRAIN LINES AND DISCHARGE LINE ARE AS SHOWN BASED ON INFORMATION SHOWN ON THE 2001 WASTEWATER TREATMENT PROJECT, BY JONES & HENRY ENGINEERS, LTD. UNCOVER PIPING AND VERIFY PIPING PRIOR TO ORDERING THE WET WELL. COORDINATE ANY VERTICAL ADJUSTMENTS REQUIRED WITH THE ENGINEER.
5. ALL WALL PENETRATIONS FOR THE WET WELL SHALL BE WITH A MECHANICAL SEAL, AS SHOWN IN NEW PIPE THRU EXISTING WALL DETAIL, SHEET NO. MC02.
6. PROVIDE ALUMINUM ACCESS LADDER AS SHOWN IN LADDER DETAIL ON SHEET NO. MC02.
7. THE ACCESS HATCH TO THE DRAIN PUMP SHALL INCLUDE HINGED SAFETY GRATING. SEE SPECIFICATION SECTION 05532.

SLUDGE PUMP STATION GENERAL MODIFICATION NOTES:

1. FURNISH AND INSTALL (1) NEW 500 POUND CAPACITY HOIST FOR THE NEW SCUM MIXER REMOVAL, WITH A MINIMUM 42" REACH BOOM WITH A MINIMUM 34° UPWARD SWIVEL. FURNISH WITH A WALL MOUNTED BASE WITH A 360° HORIZONTAL SWIVEL, A MANUAL WINCH, AND A MINIMUM 30' OF 304 STAINLESS STEEL CABLE. THE HOIST SHALL BE A THERN FIRST MATE MODEL 5122, OR APPROVED EQUAL. MOUNT TO THE SCUM WALL WITH STAINLESS STEEL EXPANSION ANCHORS, SIZED AS RECOMMENDED BY THE HOIST MANUFACTURER.
2. FURNISH AND INSTALL (1) STEEL PLATFORM, COATED, SUITABLE TO SUPPORT THE TOTAL WEIGHT OF THE NEW NPW PUMPING EQUIPMENT, BLADDER TANK, SUCTION AND DISCHARGE PIPING, AND ALL WATER CONTAINED IN THE PUMP AND PIPING. ATTACH STEEL BASE PLATES, COATED, TO BOTTOM OF THE (4) PLATFORM LEGS AND ATTACH TO CONCRETE FLOOR WITH MINIMUM (2) 3/8" STAINLESS STEEL EXPANSION ANCHORS PER BASE PLATE.
3. INSTALL NEW SUMP PUMPS, PIPING, VALVES, AND ACCESS COVER IN EXISTING 3'x3'x3' SUMP AS SHOWN IN THE BUILDING SUMP PUMP INSTALLATION DETAILS ON SHEET NO. MC07. RECONNECT TO EXISTING DISCHARGE PIPING AS REQUIRED. NEW ELECTRICAL AND CONTROLS AS SHOWN IN ASSOCIATED DRAWINGS.
4. PROVIDE 1" STAINLESS STEEL NIPPLES AND VALVES ON RAS AND WAS PUMP VOLUTES FOR AIR BLEED OFF.
5. PROVIDE (2) 2" SAMPLE TAPS ON SADDLE, STAINLESS STEEL NIPPLE, BALL VALVE, AND CAP TO BE LOCATED IN THE FIELD.
